

Title : Soc Analyst

Name : Faizan Nazir

Internship ID :

Date : 02/08/2026

1. Name of the Cyber Security Role :

SOC Analyst (Security Operations Center Analyst)

2. Main Purpose of this Role :

A SOC Analyst monitors systems and networks within an organization to detect, investigate and respond to cyber threats. They seek to protect the organization against cyberattacks and minimize security risks.

3. Why Did I Take This Role :

I chose SOC Analyst because I like to analyze security events and solve cybersecurity problems. It's a great stepping stone to a Blue Team cyber security career and gives opportunities to learn about security monitoring, incident response and threat detection.

4. Responsibilities :

Watch security alerts and logs.

Identify suspicious activities and cyber threats.

Investigate security incident.

“Respond to malware , phishing and other attacks”

Document incident and write report.

Escalate the critical issue to the senior security teams.

5. Required Skills :

Networking (TCP/IP, DNS , DHCP , Routing & Switching , HTTP)

Windows & Linux

SIEM TOOLS

Basic Scripting (Python , Bash)

Log Analysis

6. Required Soft Skills :

Analytical Thinking solving problems

Collaborate with security teams and other departments to resolve incidents quickly

Prioritize tasks

Notice small signs of any suspicious activity that indicate a attack

7. Certification Required :

CompTIA Security+

Cisco CyberOps Associate

Microsoft SC-200

CompTIA CySA+

8. 5 Common Tools Used Commonly In This Role :

1. Splunk : It is a tool which is used for to collect the logs & Analyze them.

2. Microsoft Sentinel : It is a tool which is used to monitor and respond to security incident

3. Wireshark : It is a tool which is to capture & analyze the traffic.
4. Microsoft defender For Endpoints : It is a tool which is used to detect the endpoint threats
5. Virus total : It is a tool which is used to scan the suspicious file and url's for malware detection

9. Future Prospects :

The increasing cyber threats are leading to a higher demand for soc analysts. With experience, a SOC Analyst can become an incident responder, Threat Hunter, Security Engineer or SOC Manager

10. Challenges Of This Role:

Lots of security alerts to Handle
Finding False positives
24/7 Soc (Shift work)
Keeping pace with emerging cyber threats
Fast response to security events
